eGlean Releases Legal55 Version 1.2

Connectivity with Microsoft Outlook and Adobe Acrobat Streamlines Time Tracking For Attorneys and Legal Professionals

October 30, 2002 – Boston, MA – eGlean, Inc., a developer of time tracking systems for attorneys and legal professionals, announces the release of Version 1.2 for its popular Legal55 software program. Over a dozen new features have been added to Legal55, each focusing on ease of use, enhanced productivity and revenue generation and connectivity with other popular applications used by the legal industry.

“Our growing customer base has been very vocal and supportive of eGlean in telling us how we can further improve the time collection process as it pertains to their law firms or legal departments,” said Ray Deck, President of eGlean Inc. “Our goal with Legal55 v1.2 is to continue to show our customers that we can and will meet their changing needs and requirements.”

The new release has several new features to improve the capture of time, including:

- Capture of time spent in Adobe Acrobat and Acrobat Reader
- Capture of time recorded as appointments through Microsoft Outlook
- Phone calls are now tracked using the name associated with the number in Outlook
- Emails are tracked by the name of the correspondent

Additional features make the software integrate even more seamlessly into workflow. Highlights include:

- Do Not Disturb: when too busy to attribute time to matters, Legal55 can queue activities for management later, when the user has a few minutes
- Macro shortcuts: ability to create brief “shortcuts” to quickly add verbose text without retyping, i.e. typing ‘=RCL’ could instantly generate ‘Reviewed applicable case law’
- Post-to-recent: One-click ability to attribute all unassigned time to the last project worked on
- Startup Wizard: attorneys using the software for the first time are walked through the initial data collection process in an easy and quick set of questions.
- Automatic update: the software will prompt the user with instructions for new versions as they become available

Legal55 is designed for any size law firm, allowing time to be tracked from anywhere. Its activity-based Time Tracker automatically records the amount of time spent working with clients. This automation significantly increases the accuracy of timesheets and reduces the amount of time spent completing them. It tracks activities on documents, emails and phone calls in the background and fills in the electronic timesheet as appropriate. The net result is more hours captured and attributed to the correct client and matter, without forcing the legal professional to change his or her work habits. Legal 55’s unique design complements a firm’s existing time and billing system, ensuring that billable time spent on a computer or the phone, which is not always captured with traditional time billing systems, is accurately captured and made available for export and subsequent billing to clients.

About eGlean
